Bible and Science - When Research Plays Catch-up

Roger Liebi

Comparing the Bible with Science, one has to conclude that in many of its statements the Bible was far ahead of the research at the time it was written. For example, it took thousands of years to confirm the following biblical statements as being scientifically accurate:

- The earth hangs over nothing.
- The stars are innumerable.
- The hare chews the cud.

- The embryo exists as an unformed mass in the early stage.

- The air has weight.

This booklet gives approx. 30 examples, in which the Bible was far ahead of science.
